There is a misprint in Table I, as the quadrupole moments and gyromagnetic ratios of  $^{69}\text{Ga}$  and  $^{71}\text{Ga}$  were switched around. The correct values are for  $^{69}\text{Ga}$ :  $Q = 17.1 \times 10^{-30} \text{ m}^2$ ,  $\gamma_N = 0.64 \text{ kHz/G}$ , and for  $^{71}\text{Ga}$ :  $Q = 10.7 \times 10^{-30} \text{ m}^2$ ,  $\gamma_N = 0.82 \text{ kHz/G}$ .
