Errata

Erratum: Nonexistence of metastable states in a one-dimensional Heisenberg model spin-glass [Phys. Rev. B 24, 319 (1981)]

T. A. Kaplan

Footnote 10. The third sentence from the end of this footnote should read as follows: F. Tanaka and S. F. Edwards (TE) (unpublished), use the term "local minimum" within both Ising and continuous-vector-spin models to mean a state for which single-spin flips raise the energy, and the term "true local minimum" for what I (and other sources) call simply a local minimum.

Erratum: Low-energy density of states for disordered magnetic chains [Phys. Rev. B 24, 1384 (1981)]

C. M. Grassl, L. H. Zhao, and D. L. Huber

The dashed curve in Fig. 3 is mislabeled. Rather than being the asymptotic CPA result, it is obtained from a numerical calculation using the full CPA formalism. Recent analytic work by W. R. Schneider has shown that for the distribution studied in the paper the CPA density of states agrees with the first three terms of an exact asymptotic expansion. [J. Bernasconi (private communication). We would like to thank Dr. Bernasconi for bringing this error to our attention.]
