Erratum: Relation between surface reconstruction and RHEED intensity oscillations
[Phys. Rev. B 58, 6716 (1998)]

Makoto Itoh

The 8th and 9th lines from the end on page 6717 are incorrect. “the metastable (2×2) surface reconstructions;¹⁰ even other metastable structures might be involved” should read “the metastable $\sqrt{3}\times\sqrt{3}-R30^\circ$ surface reconstructions;¹⁰ even other metastable structures such as the (2×2) structure and the $c(2\times 4)$ structure may be involved.”

The entire sentence should therefore read:

For instance, the peak intensities of the DPO in Ge(111) homoepitaxy are found to interchange between low and high-temperature growth regimes,^{15–17} and this is attributed to the competition between the stable $c(2\times 8)$ and the metastable $\sqrt{3}\times\sqrt{3}-R30^\circ$ surface reconstructions;¹⁰ even other metastable structures such as the (2×2) structure and the $c(2\times 4)$ structure may be involved.
