I have found that the low- $Q^2$  expansion for the magnetic moment, reported in Eq. (5.6), contains errors which alter the numerical results. The corrected expansions are given in Eq. (G4), and the corrected numerical results are given in Table X of Ref. [1] (included in this issue).

Equations (B1), (B2), (B7), and (B10) also contain a number of typographical errors that arose when the original *Mathematica* formulas were transcribed into text. The corrections to these formulas are reported in Appendix G of Ref. [1]. Fortunately, previous results are not affected by these errors since they were derived directly from the correct *Mathematica* formulas. The errors in the expansions of the magnetic moments referred to above also do not owe their origin to these corrections; both the correct expansion (G4) of Ref. [1] and the incorrect expansion (5.6) of the original paper started from the correct *Mathematica* formulas.
