In this paper we erroneously stated that the half-life of the 2_1^+ state of 168 Hf is $T_{1/2} = 1.237(10)$ ns. This value is the mean life of the state, and its half-life is accordingly $T_{1/2} = 0.857(7)$ ns. However, in the calculation of the *g* factor from the experimental data, the correct value of the half-life was used, so the deduced value of the *g* factor is correct and the discussion is not affected by the above error.
