**Erratum: Thrust distributions near  $T=1$   
[Phys. Rev. D 23, 2791 (1989)]**

M. Greco and Y. Srivastava

Careful perturbative analysis to order  $\alpha_s^2$  shows that the term  $\beta_g \ln^2(1-T)$  in Eq. (14) is canceled by the finite order- $\alpha_s^2$  term, not included in our analysis. This result casts some doubt on the exponentiation of the gluon term. Further analysis is needed to clarify the situation.
