The values for the form factors $f_+^{B\eta'}(0)$ and $f_+^{B\eta}(0)$, taken from Ref. [5], should be multiplied by a factor of $1/\sqrt{6}$ and $1/\sqrt{3}$, the normalization constants of the η' and η wave functions, respectively, for the $\eta - \eta'$ mixing angle $\theta = -19.5^\circ$. As a consequence, the predicted branching ratios for hadronic charmless B decays involving η or η' given in Tables II and III should be modified as shown in the following table:

Decay	Br	Decay	Br
$B_d^0 \rightarrow K^0 \eta$	1.7×10^{-8}	$B_d^0 \rightarrow K^0 \eta'$	1.9×10^{-5}
$B_d^0 \rightarrow \pi^0 \eta$	4.3×10^{-6}	$B_d^0 \rightarrow \pi^0 \eta'$	1.4×10^{-5}
$B_d^0 \rightarrow \eta \eta$	2.4×10^{-6}	$B_d^0 \rightarrow \eta \eta'$	9.9×10^{-6}
