Figures 1 and 5 should be replaced by the ones below. The original figures showed the final state associated with the proton as consisting purely of the diffractive proton p'. In fact, as shown in the replacement figures, there are other particles in this part of the final state; these form what is often termed the ''Pomeron beam jet.''

FIG. 1. Leading regions for diffrative DIS.

FIG. 5. Soft gluon exchange between proton subgraph and jet subgraph.
