

**Erratum: $B \rightarrow K_1 \gamma$ decays in the light-cone QCD sum rules
[Phys. Rev. D 77, 094023 (2008)]**

Hisaki Hatanaka and Kwei-Chou Yang

(Received 11 September 2008; published 29 September 2008)

DOI: 10.1103/PhysRevD.78.059902

PACS numbers: 13.20.He, 12.38.-t, 12.38.Lg, 14.40.Ev, 99.10.Cd

Eq. (3.7) should read

$$A_{\text{ver}}^{(1)}(\mu) = \frac{\alpha_s(\mu)}{4\pi} \left\{ \frac{32}{81} [13c_1^{(0)}(\mu) - 9c_8^{(0)\text{eff}}(\mu)] \ln \frac{\tilde{m}_b}{\mu} + \frac{4}{27} (33 - 2\pi^2 + 6\pi i) c_8^{(0)\text{eff}}(\mu) - \frac{16}{3} c_7^{(0)\text{eff}} + r_2(z) c_1^{(0)}(\mu) \right\}.$$

Accordingly, Eq. (5.14) is corrected to be

$$\mathcal{B}(B \rightarrow K_1 \gamma) = \tau_B \frac{G_F^2 \alpha |V_{tb} V_{ts}^*|^2}{32\pi^4} m_{b,\text{pole}}^2 m_B^3 \left(1 - \frac{m_{K_1}^2}{m_B^2}\right)^3 (T_1^{K_1}(0))^2 |(-0.360 - i0.015) + A_{\text{sp}}^{(1)K_1}(\mu_h)|^2,$$

and then Fig. 2 and Table II should be revised as shown.

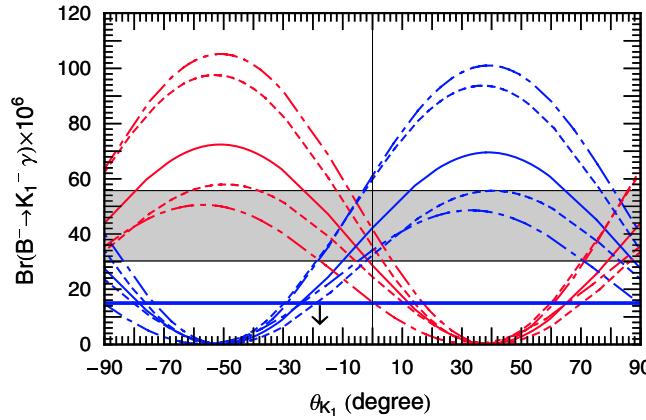

FIG. 2 (color online). Branching ratios as functions of the mixing angle θ_{K_1} . The upper five curves at $\theta_{K_1} = -50^\circ$ are for the $K_1(1270)\gamma$ mode, and the lower five curves for the $K_1(1400)\gamma$ mode. The solid curves correspond to central values of the input parameters. The dot-dashed and dashed curves denote the theoretical uncertainties due to the parameters of LCDAs and $m_{b,\text{pole}}$, respectively. The horizontal line is the experimental limit on $B \rightarrow K_1(1400)\gamma$, and the horizontal band shows the experimental result for the $K_1(1270)\gamma$ mode with its 1σ error.

TABLE II. Branching ratios for the radiative decays $B \rightarrow K_1(1270)\gamma$, $K_1(1400)\gamma$ (in units of 10^{-6}) in this work and the experiment [1].

	$\mathcal{B}(B^- \rightarrow K_1^-(1270)\gamma)$	$\mathcal{B}(B^- \rightarrow K_1^-(1400)\gamma)$
Experiment	43 ± 13	< 15
This work	$66^{+21+30+2+6}_{-12-24-4-12}$	$6.5^{+4.0+2.6+0.1+11.9}_{-2.2-0.0-0.2-5.9}$
Experiment	$\mathcal{B}(\bar{B}^0 \rightarrow \bar{K}_1^0(1270)\gamma)$ < 58	$\mathcal{B}(\bar{B}^0 \rightarrow \bar{K}_1^0(1400)\gamma)$ < 15
This work	$62^{+19+28+2+5}_{-12-23-4-12}$	$6.1^{+3.7+2.4+0.0+11.1}_{-2.1-0.0-0.2-5.5}$
