The curves on the right panel of Fig. 8, that were supposed to correspond to temperature $T=10^{6.5}$ K, were actually drawn for $T=10^{7.5}$ K. We thank Dr. Dong Lai who pointed out this mistake.

The correct version of Fig. 8 is given here.

FIG. 8. Dependence of the atomic fraction f_H (solid lines) and the fraction of the optically identifiable atoms (dashed lines) on the magnetic field strength at two values of ρ (indicated in the figure), $T=10^{5.5}$ K (upper curves) and $10^{6.5}$ K (lower ones). The atomic fraction at $B=0$ (triangles) and the approximation of D. Lai and E. E. Salpeter [Astrophys. J. **491**, 270 (1997)] (dotted lines) are shown for comparison.
