In the section discussing our results within the framework of the standard model extension (SME) on p. 4 of our Letter, we omitted the unit “GeV” in quoting upper bounds for two proton and electron tilde SME parameters. Correctly, the bounds are $|\tilde{c}_Q^p| < 2 \times 10^{-11}$ GeV for the proton and $|\tilde{c}_Q^e| < 2 \times 10^{-8}$ GeV for the electron.

We thank Alan Kostelecký for bringing this omission to our attention.
