**HEAVY-ION-PRODUCED HIGH-RESOLUTION Si-K-X-RAY SPECTRA FROM A GAS AND SOLID.**

Robert L. Kauffman, K. A. Jamison, Tom J. Gray, and Patrick Richard [Phys. Rev. Lett. 36, 1074 (1976)].

On page 1075, the last sentence reads, "The plasmon lifetime in Si ( $\sim 4 \times 10^{-17}$  sec)... ." The sentence should read, "The inverse of the plasmon frequency in Si ( $\sim 4 \times 10^{-17}$  sec)... ." This change does not affect any conclusions deduced in the Letter. The authors would like to thank Dr. Kenneth D. Sevier for bringing this error to our attention.

**POLARIZATION DEPENDENCE OF ANGULAR-RESOLVED PHOTOEMISSION FROM *d* BANDS OF Cu.** E. Dietz, H. Becker, and U. Gerhardt [Phys. Rev. Lett. 36, 1397 (1976)].

At the bottom of the second column on page 1398, the sentence comparing the experimental spectra with the theoretical predictions should read, "Comparing the spectra in the upper portion of Fig. 1 with the calculated energy contours in Fig. 3, it is evident that the broad hump in the *parallel* spectrum centered at 4.2-eV kinetic energy corresponds to the uppermost transition in the  $\bar{\Gamma}=30^\circ$  cone in Fig. 3 with the initial band being of *sp* type."
