

IRREVERSIBLE PONDEROMOTIVE EFFECTS IN A PLASMA. Hans Schamel [Phys. Rev. Lett. 42, 1339 (1979)].

Throughout the paper  $T$  should be replaced by  $p$ , the pressure. In formula (9), the second term on the right-hand side should be multiplied by  $\delta^{1/2}$ , and in formula (14),  $x^2$  is missing in front of  $K_1$ . It then follows that for small  $x$ ,  $I_2$  in (15) behaves like  $-\ln x$ . Consequently, all perturbations die out in the time asymptotic limit.

SYMMETRY IN LOW-ENERGY-POLARIZED-ELECTRON DIFFRACTION. G.-C. Wang, B. I. Dunlap, R. J. Celotta, and D. T. Pierce [Phys. Rev. Lett. 42, 1349 (1979)].

The last sentence should read as follows: "One of us (B.I.D.) would like to acknowledge support from a National Bureau of Standards-National Research Council (U.S.A.) Postdoctoral Research Associateship."

SEARCH FOR AXION PRODUCTION IN LOW-ENERGY ELECTRON BREMSSTRAHLUNG. D. J. Bechis, T. W. Dombeck, R. W. Ellsworth, E. V. Sager, P. H. Steinberg, L. J. Teig, J. K. Yoh, and R. L. Weitz [Phys. Rev. Lett. 42, 1511 (1979)].

In the byline the name of the sixth author was misspelled. It should read L. J. Teig.
