ERRATA

K-π RESONANCE AND THE LIFETIME OF THE
K' PARTICLE. Mirza A. Baqi Bég and Paul C.
DeCelles [Phys. Rev. Letters 6, 145 (1961)].

A numerical error in Eq. (2) affects many of
the subsequent equations as well as the tentative
indentification of the spin of the π-K resonance.
The equations may be corrected throughout
the Letter by replacing τ_S (τ_V) by $3\tau_S$ ($3\tau_V$)
everywhere it occurs. Accordingly, the para-
graph containing (11) should be replaced by
"Alternatively, a precise knowledge of σ and
the resonance width, Γ, could distinguish be-
tween the two alternatives. With the available
data,

$$\sigma(K^- + p \rightarrow \overline{K}^0 + \pi^- + p)$$

$$= 2\sigma(K^- + p \rightarrow K^- + \pi^0 + p) \approx (1 \pm 0.42) \text{ mb},$$

and thus

$$0.298 < \tau_S \times 10^{23} < 0.729,$$

$$3.76 < \tau_V \times 10^{23} < 9.20, \qquad (11)$$

whereas $2.38 < (1/\Gamma_{\exp}) \times 10^{23} < 3.58$. Therefore,
present experimental evidence supports the K_V
alternative."

We wish to thank several colleagues who called
our attention to this error.

TWO-PARAMETER APPROXIMATION TO S-WAVE
SCATTERING. Daniel M. Greenberger and B. Mar-
golis [Phys. Rev. Letters 6, 310 (1961)].

In formula (3) replace a by $2a$. In the paragraph
below formula (3) replace z by ν everywhere.
