
E R R A T A

NEW SOLID PHASE IN He⁴. J. H. Vignos and H. A. Fairbank [Phys. Rev. Letters 6, 265 (1961)].

The last factor in Eq. (1) should read $(\Delta V_{\alpha, \gamma} / \Delta V_{\gamma, l})$ instead of $(\Delta V_{\gamma, l} / \Delta V_{\alpha, \gamma})$.

LOSS OF C¹¹ FROM PLASTIC FOILS AND ITS EFFECT ON CROSS-SECTION MEASUREMENTS. J. B. Cumming, A. M. Poskanzer, and J. Hudis [Phys. Rev. Letters 6, 484 (1961)].

The authors' attention has been called to a paper on the loss of activity from betatron-irradiated samples by diffusion, by H. Fuchs and K. H. Lindenberg, Nuclear Instruments and Methods 7, 219 (1960), which previously reported the same effect for C¹¹ produced by a (γ, n) reaction. Their results and ours obtained for C¹¹ produced by (p, pn) and $(n, 2n)$ reactions are in good agreement which indicates that the effect is not very sensitive to the means of producing C¹¹.
