**Light-Neutrino Masses and the Strong  $CP$  Problem.**  
MICHAEL SHIN [Phys. Rev. Lett. **59**, 2515 (1987)].

The address of the author should read as follows:  
Physics Department, Brown University, Providence,  
Rhode Island 02912. Address after 31 July 1987 is  
Department of Physics, University of California-Irvine,  
Irvine, California 92717.

Reference 11 should also include K. Kang and  
A. Pantziris, Phys. Lett. B **193**, 467 (1987).

**Observation of the Transition State  $HD_2^\ddagger$  in Collisions,  
 $H+D_2$ .** B. A. COLLINGS, J. C. POLANYI, M. A. SMITH,  
A. STOLOW, and A. W. TARR [Phys. Rev. Lett. **59**, 2551  
(1987)].

The transition state should read  $HD_2^\ddagger$  instead of  
 $HD_2^{++}$ . The “double dagger” symbol,  $\ddagger$ , implies the  
transition state of a neutral ground-state chemical reac-  
tion; no charged species are involved. The “transition  
state” denotes configurations intermediate between reac-  
tants and products.

Reference 25 should read J. Chem. Phys. **84**, 727  
(1986).
