**Consistent Description of High- T_c Superconductors with the Three-Band Hubbard Model
[Phys. Rev. Lett. 68, 353 (1992)]**

G. Dopf, A. Muramatsu, and W. Hanke

An important reference was omitted and should be added to Ref. [21]. The omitted reference was R. T. Scalettar, D. J. Scalapino, R. L. Sugar, and S. R. White, Phys. Rev. B **44**, 770 (1991).

**Vortex Solutions in the Weinberg-Salam Model
[Phys. Rev. Lett. 68, 1977 (1992)]**

Tanmay Vachaspati

I am indebted to Margaret James for bringing the following error to my attention: In Eq. (15), terms 1, 2, 3, and 5 should be multiplied by 2. This error will affect the subsequent analysis of stability against ξ perturbations. In particular, Eq. (33) should read

$$S(r) = \frac{1}{2} g^2 \eta^2 f_0^2 \left(\frac{1}{2} \pm 1/n \right) r^2 \quad (r \rightarrow 0). \quad (33)$$

This means that the $n = 1, 2$ modes can potentially lead to an instability. The stability problem will be analyzed in detail elsewhere.
