Anomalous fcc Crystal Structure of Thorium Metal
[Phys. Rev. Lett. 75, 280 (1995)]

B. Johansson, R. Ahuja, O. Eriksson, and J. M. Wills

We regret not referring to a paper by Rao, Godwal, and Sikka [1] who by means of first principles, linear muffin-tin orbital band calculations (in the atomic sphere approximation) conclude that Th is a $5f$ band metal at ultra high pressures.

[1] R. S. Rao, B. K. Godwal, and S. K. Sikka, Phys. Rev. B **46**, 5780 (1992).
