The two phase region for the monodisperse Flory-Huggins theory referred to in the caption of Fig. 2 was omitted accidentally in the original. The correct Fig. 2 is reproduced below.

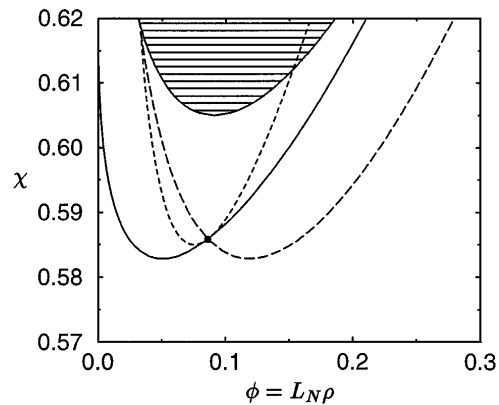

FIG. 2. A cut through the phase behavior in Fig. 1 by the physical ($\phi = L_N \rho, \chi$) plane showing the cloud curve (solid line), shadow curve (long-dashed line), spinodal curve (dashed line), and the critical point. Also shown for comparison is the two phase region for the monodisperse Flory-Huggins theory with the same mean chain length, $L = 100$.
