Erratum: Nonadiabatic Quantum Brownian Rectifiers
[Phys. Rev. Lett. 81, 649 (1998)]

Igor Goychuk, Milena Grifoni, and Peter Hänggi

[S0031-9007(98)07117-8]

On page 650, in paragraph (i) in the left-hand column, the first sentence should read as follows: "Because the *noise-average* of the integral in (6) is bounded for *any* stochastic field, the stationary dc current is always zero."

In Eq. (7), the term $e^{-yt/2}$ should read as $e^{-\chi t/2}$.

Below Eq. (11), in the expression for $Q(t)$, the second term containing β should also be multiplied by $\hbar$.

In Eq. (16), second line, the plus sign within the rectangular brackets should read minus, i.e., $\left[\gamma_1^- - \gamma_2^-\right]^2$.
